Validity

The present Migration Guide is to assist in migrating the frequency inverter series SK 700E to the innovative next frequency inverter series SK 500E. Use the Migration Guide as planning aid in addition to the respective main manuals BU 0700 or BU 0500 and BU 0505. The present Migration Guide provides all the information needed to migrate any of the frequency inverter types. MI 0700 also contains a summarised comparison of additional and optional components necessary for basic migration/planning of drive technology applications. For more information, in particular regarding parameters, options and special functions please refer to the latest respective main manuals of the frequency inverters and applicable instructions for field bus options (such as PROFIBUS DP) or special frequency inverter functions such as POSICON).

1 Introduction

This document serves for the migration of drive solutions with SK 700E series frequency inverters to the new model SK 500E. As well as the comparison and migration of the usual modules in the first part of the document, the middle part deals with the comparison of the connection terminals and the final part describes the dimensions of the devices.

Both series (SK 700E and SK 500E) are similar in their basic structure, however the performance and scope of functions of the new series has been considerably increased. Until the end of 2013, the SK 5xxE will also be available up to size 11 (160.0 kW) for the identical power range of the SK 700E. The comparison only covers the 3 ph ~ 400 / 480 V types of frequency inverters. The present document only describes the functions and solutions which could also be implemented with the SK 700E. In addition, in the description of possible options, only the most common have been described and listed in detail. The Migration Guide MI 0700 also compares the respective additional components.

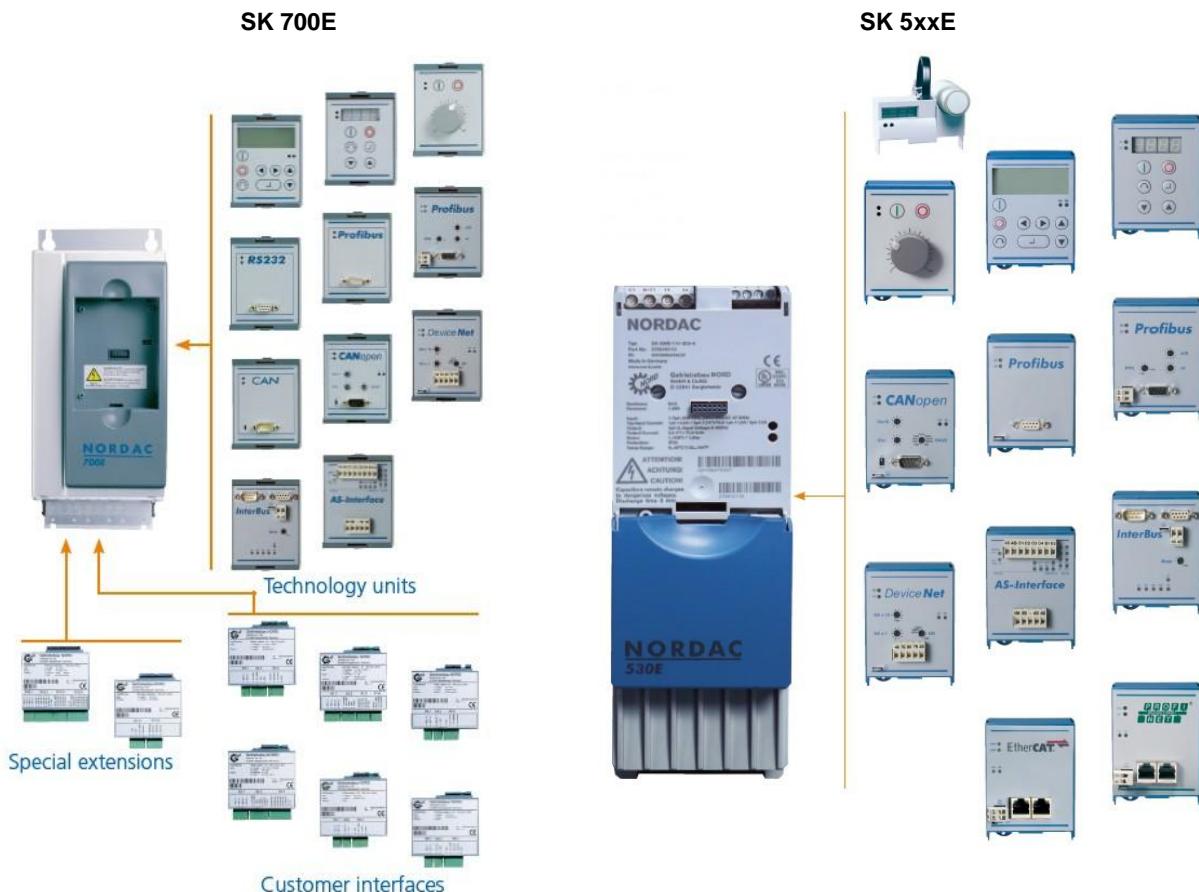

Figure 1: System Overview

1.1 Components overview

The following table lists and compares the individual components for the conversion of the two different frequency inverter series. Both frequency inverter types comply with protection class IP20. Special variants such as frequency inverters and options with coated boards are not described in detail.

SK 700E		SK 700E components / Functions	SK 5xxE

Table 2: Components overview

1.2 frequency inverters overview

The assignment of the SK 700E frequency inverters dependent on function and rated power of the devices is summarised below. The overview table below shows each of the customer units SK CU1-xxx, extension units SK XU1-xxx and the two CAN or CANopen technology options SK TU1-CAN and SK TU1-CAO for the SK 700E frequency inverter.

Additional functions of field bus systems or technology units (such as AS-Interface, PROFIBUS DP, DeviceNet etc.) are listed in chapter 2.2.2 Field bus and communication technology units. The I/O customer unit types SK CU1-xxx of the SK 700E series of frequency inverters are also described there in greater detail.

Where needed, these different customer units are used to connect I/O control signals.

Table 3: Overview of frequency inverter functions

Information Integrated mains filter

Information

RS232 interface variants

The functions of SK 700E frequency inverters in the power range of 1.5 kW to 22.0 kW can also comprise an additional **RS232** interface. Frequency inverter variants with optional **RS232** are identified with abbreviation **RS2** in the type code on the type label of SK 700E devices. For the power range of 1.5 kW to 22.0 kW, the **RS232** interface variant of the SK 700E is an additional optional function. By default, SK 700E frequency inverters \geq 30.0 kW come with an **RS232 / RJ12** interface led out.

For information on the SK 700E- ...-A-RS2 frequency inverters with optional **RS232 / RJ12** interface, please refer to the respective manual (BU 0700) (www.nord.com).

RS232 / RJ12 onboard sizes 1 – 4 (optional)

RS232 / RJ12 onboard sizes 5 – 8 (Standard)

Figure 2: optional and on board RS232 / RJ12 interface with SK 700E

2 Implementation

Frequency inverters of the SK 5xxE series come in 10 different performance levels (SK 500E, SK 505E, SK 510E, SK 511E, SK 515E, SK 520E, SK 530E, SK 535E, SK 540E, SK 545E). In general, a distinction is made between SK 5x0E and SK 5x5E devices.

Sizes 1 to 4 of the SK 700E frequency inverters (1.5 kW to 22.0 kW) always come with a shield bracket fitted to the frequency inverter housing. Shield clamps (size 8 to 35) specific to the cable cross section and size are not supplied ex factory and, if necessary, will be provided and/or mounted by persons charged with installation while fitting and setting up the SK 700E frequency inverters.

When migrating an application to the SK 5xxE series of frequency inverters **you should always** provide for an additional **EMC kit** suitable for type **SK EMC 2-x** according to the size.

SK 700E types

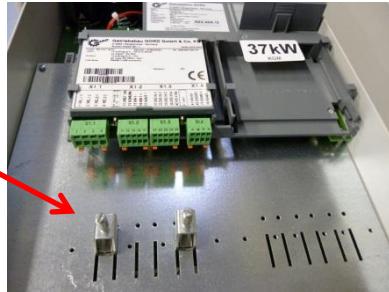

Sizes 1 – 4 or performance levels ≤ 22.0 kW with shield bracket for fitting shield clamps	Sizes ≥ 5 or ≥ performance levels 30.0 kW with shield plate and shield clamps (KGM variant only)
 Shield clamp ← Shield bracket

Figure 4: SK 5xxE size-dependent EMC kits (with shield bracket, shield clamps, PE cable)

Information

EMC kits SK EMC2-x

Chapter 2.5 provides an overview of SK EMC 2-x EMC kit available for the SK 5xxE frequency inverter series specific to size.

2.1 Frequency inverter

2.1.1 Performance levels

Table 4: Overview SK 5xxE standard and incremental encoder input

NOTICE	Encoder supply voltage
	Incremental encoders with 5 V supply voltage can be directly operated with frequency inverters of the SK 700E series. For the SK 5xxE series of frequency inverters, the connected incremental encoders must be suitable for a supply voltage range of 10 V ... 30 V. This is why the incremental encoders must be replaced or the "old" encoders must be supplied from an external power supply when migrating to SK 5xxE frequency inverters.

Table 6: Overview of SK 5xxE performance levels for POSICON positioning control

NOTICE

Encoder supply voltage

Incremental encoders with 5 V supply voltage can be directly operated with frequency inverters of the SK 700E series. For the SK 5xxE series of frequency inverters, the connected incremental encoders must be suitable for a supply voltage range of 10 V ... 30 V.

This is why the incremental encoders must be replaced or the "old" encoders must be supplied from an external power supply when migrating to SK 5xxE frequency inverters.

2.1.2 Customer units and extension units

To connect I/O control signals to the SK 700E frequency inverters, additional **SK CU1-xxx** IO customer units are required. In contrast, the SK 5xxE series of frequency inverters by default comes with respective onboard terminals to connect the standard I/O control signals.

When migrating to an SK 500E frequency inverter, you should provide for a performance level \geq SK 511E with integrated onboard CAN / CANopen interface for SK 700E field bus customer units of SK CU1-CAN and SK CU1-CAN-RJ types.

Information

CAN / CANopen 24 V supply

When using the onboard CAN / CANopen interface of \geq SK 511E frequency inverters, it is mandatory to connect an **additional 24 V power supply for the CAN / CANopen Bus** to the RJ45 sockets.

For easier cabling and connection of functions (for 24 V supply and CAN / CANopen bus connection cables), the WAGO adapter module RJ45/terminal (see chapter 2.1.3 Additional options for the functions) can be used with conventional patch cables.

For the SK 5xxE series of frequency inverters, only one of the two PROFIBUS DP technology units type SK TU3-PBR or ...-24V can be planned in connection with a SK 700E PROFIBUS DP field bus customer unit type SK CU1-PBR.

Special extensions ENCODER / incremental encoder input type SK XU1-ENC and the POSICON positioning control SK XU1-POS of the SK 700E frequency inverter are migrated to the SK 5xxE series of frequency inverters with different performance levels such as the SK 52xE (with ENCODER / incremental encoder input) or the SK 53xE (with POSICON / positioning control) series.

The sub-chapters to follow list some differences in function of the two series of frequency inverters that must be heeded under all circumstances which must be taken into account when migrating from the SK 700E to the SK 5xxE series or when migrating applications:

Customer unit SK CU1-xxx Part number	SK 700E IO customer unit data	Frequency inverter SK 5xxE + additional options	Frequency inverter SK 54xE + / or additional options
Basic IO SK CU1-BSC  278200000	Basic customer unit 1 x multifunction relay 3 x digital inputs 1 x analogue input 0...10 V	all SK 5xxE * onboard	
Standard IO SK CU1-STD  278200020	Standard customer unit 2 x multifunction relays 4 x digital inputs 1 x analogue input 0...10 V, 0/4...20 mA 1 x analogue output, 0...10 V 1 x RS485 interface	all SK 5xxE * onboard	
*	All frequency inverters, except SK 515E (available \geq size 5 only).		

Customer unit SK CU1-xxx Part number	SK 700E IO customer unit data	Frequency inverter SK 5xxE + additional options	Frequency inverter SK 54xE + / or additional options

*	All frequency inverters, except SK 515E (available ≥ size 5 only).	
*****	If next to the PROFIBUS DP customer unit SK CU1-PBR an operation and diagnostic technology unit is also used with the SK 700E application, a SimpleBox SK CSX-0 or a handheld control box SK PAR-3H or SK CSX-3H should be planned for SK 5xxE application, in addition to the technology unit SK TU3-PBR for frequency inverter operation. The connection types of the two different PROFIBUS DP field bus options also differ. PROFIBUS DP connection to the SK CU1-PBR customer unit occurs via spring loaded terminals. PROFIBUS DP connection to the technology unit SK TU3-PBR or SK TU3-PBR-24V occurs at the front with a 9-pole SUB-D connector (must be provided separately). For more information refer to the PROFIBUS DP Supplementary Operating Instructions BU 0020 (see www.nord.com).	
*****	The WAGO adapter module RJ45 / terminal (278910300) and commercially available pre-assembled RJ45 patch cables allow for easy connection of the additional external 24 V power supply for the CAN bus and the CAN connection cables.	
*****	All frequency inverters ≥ SK 520E feature the RS485 interface next to the RJ12 on connector block X11 and also on terminal block X7 or terminals 74 and 75.

Table 9: Overview and assignment of extension units SK XU1-xxx

NOTICE

Encoder supply voltage

Rotary encoder with 5 V power supply must not be connected to the SK 5xxE frequency inverters directly. For this application, a commercially external power supply should be used because the SK 5xxE frequency inverters only feature a 10...30 V output for connection of a incremental encoder.

This is why the rotary encoders must be replaced or the "old" encoders must be supplied from an external 5 V power supply when migrating to SK 5xxE frequency inverters.

2.1.3 Additional options for the functions

To migrate the various application functions, several options are available for the SK 5xxE series of frequency inverters.

Options Name	Picture	Part Number
WAGO adapter module RJ45/terminal		278910300
Setpoint converter $\pm 10 \text{ V} \rightarrow 0 \dots 10 \text{ V}$		278910320
IO extension SK EBIOE-2 (only SK 540E / SK 545E)		275900210

Table 10: Overview of additional function options

Information

WAGO adapter module RJ45/terminal

The WAGO adapter module RJ45/terminal comes with a shield clamp and is used to connect the CAN bus cable and the external necessary 24 V power supply for the CAN / CANopen bus system. Signal connection occurs with spring terminals on the input side and an RJ45 western socket on the output side. This adapter module RJ45/terminal facilitates the connection of the CAN bus system to frequency inverters of performance levels \geq SK 52xE.

For more information and details, please refer to the operating instructions of the frequency inverter.

Information

Setpoint converter $\pm 10 \text{ V}$

The setpoint converter $\pm 10 \text{ V}$ is used to convert the signal for the analogue inputs of unipolar ($0 \dots 10 \text{ V}$ and $0 / 4 \dots 20 \text{ mA}$) to bipolar ($-10 \text{ V} \dots +10 \text{ V}$) voltages. SK 5xxE frequency inverters of size 5 ($\geq 11 \text{ kW}$) and higher can process unipolar and also bipolar analogue inputs by way of configuration with DIP switches.

For more information and details, please refer to the operating instructions of the frequency inverter.

Information

IO extension

IO extension SK EBIOE-2 lets you connect additional IO control signals and is suitable for SK 540E or SK 545E frequency inverters.

For more details please refer to Technical Information / Data Sheet TI 275900210.

*	To connect more digital inputs (acc. to SK XU1-POS) to the SK 545E frequency inverter, the optional IO extension SK EBIOE-2 (275900210) is offered. Connection of the analogue inputs ± 10 V to the SK 545E frequency inverters occurs directly to the terminal block X4 of the SK 545E from size 5 onward. As an alternative, the ± 10 V analogue inputs can also be connected with terminal blocks X1 + X2 (see TI 275900210) when an IO extension of type SK EBIOE-2 (275900210) is used.
**	Commercially available external signal converters are necessary if the analogue outputs of the SK 5x5E frequency inverters are used and signal conversion to 0/4 ... 20 mA compatible with SK CU1-MLT-20mA is necessary. As an alternative, connection could occur to terminal block X2 (see TI 275900210) if only one 0/4 ... 20 mA analogue output is used in conjunction with an SK 545E frequency inverter and a type SK EBIOE-2 (275900210) IO extension.

Table 13: Performance levels SK 700E sizes 6 - 8 / 45.0 kW to 160.0 kW

2.2 Technology units

The technology units are available as optional extensions for the modular slot on the front of the frequency inverter. There are plug-in technology units for communications and operation/diagnosis.

The first sub-chapter presents the optional and replaceable operation/diagnosis options providing data backup and saving functions (number of storage areas) of parameter and data records.

The second sub-chapter presents the optional and replaceable communication technology units. These are used for individual solutions and applications for implementing the standard field bus control systems such as PROFIBUS DP, CAN, CANopen, DeviceNet, AS-Interface, etc.

2.2.1 Technology units for operation and diagnosis

Table 15: Field bus and communication technology units

 Information	Operating Manual
For more information on the field bus and communication technology units listed in this chapter (RS232, PROFIBUS DP, CAN, CANopen, etc.), refer to the separate bus-specific Operating Instructions BU 00xx (see www.nord.com). For an overview of the Operating Instructions, please refer to Section 5.1.1 Manuals.	
<hr/>	
 Information	NORD software files
The appropriate software files (GSD, EDS) are available for download in Internet (see www.nord.com) for the field bus options which are available for the relevant options.	
The software files for the SK 5xxE series of frequency inverters differ from those for the SK 700E series. For further details please refer to chapter 5.2.2 NORD options.	

2.3 Control boxes / control units

The convenient control boxes / control units are offered as optional extension units for direct connection to the frequency inverters. There are two versions - a **handheld** and an **installation version** of the control boxes.

The next two sub-chapters describe and compare the control boxes and versions available as option.

Information

Operating Manual

For more information on the control box versions (PotentiometerBox, ControlBox, ParameterBox and SimpleBox), refer to the separate Operating Instructions BU 0040 (see www.nord.com).

Information

Software update

There are new software versions for older models of the control boxes (handheld and installation versions of Simple ControlBox and ParameterBox). To update the software, contact Service / Technical Support if needed, refer to chapter 5.5 Technical support for more information.

2.3.1 Handheld version

Control box SK PAR-2H Part No.	Name Information Data	Control box SK xxx-3H Part No.
Simple ControlBox not available	Handheld Simple ControlBox (SK CSX-xH) <ul style="list-style-type: none"> • IP54 • 4-digit 7-segment LED display • ON/OFF /Reverse button • display parameter record LEDs • RJ12 socket 	SK CSX-3H  275281013
ParameterBox 	Handheld ParameterBox (SK PAR-xH) <ul style="list-style-type: none"> • IP54 • illuminated plain text display • 4-row LCD • ON/OFF /Reverse button • save 5 data records • Status LEDs • 6 languages • help texts • incl. connection cable(M12 / RJ12) • USB interface (only SK PAR-3H) for connection to PC 	SK PAR-3H  275281014

Table 16: Handheld control boxes

2.3.2 Built-in variant

The following control boxes/units are designed for installation in switch cabinet doors and control panels.

Control box SK PAR-2E Part No.	Name Information Data	Control box SK xxx-3E Part No.
Simple ControlBox not available	Built-in Simple ControlBox (SK CSX-xE) <ul style="list-style-type: none"> • IP54 (front) • 4-digit 7-segment LED display • ON/OFF /Reverse button • display parameter record LEDs • RJ12 socket 	SK CSX-3E  275281413
ParameterBox SK PAR-2E  278910110	Built-in ParameterBox (SK PAR-xE) <ul style="list-style-type: none"> • IP54 (front) • illuminated plain text display • 4-row LCD • ON/OFF /Reverse button • save 5 data records • status LEDs • 6 languages • help texts • screw terminals(only SK PAR-2E) and RJ12 connection socket (both units) 	SK PAR-3E  275281414

Table 17: Built-in control boxes

2.4 Accessories and adapter cables

Several accessories and adapter cables are offered for parameter set-up and commissioning of frequency inverters. With these accessories, the frequency inverter can be connected to a PC and controlled with the NORDCON software.

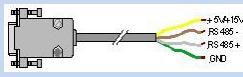

SK 700E Type Part No.	Name Information Data	SK 5xxE Type Part No.
Interface converter SK IC1-232/485  276970020	Interface converter RS232 / RS485 <ul style="list-style-type: none"> • Signal converter from RS485 to RS232 • Baud rate selectable from 4800 to 38400 bps with DIP switch • external +5 V power supply with USB / 5 V supply cable (278910220) for SK IC1-232/485 • terminator resistor via DIP switch 	SK 5xxE with RS232 interface not required
VECTOR connection cable  278910020	P-Box Vector connection cable <ul style="list-style-type: none"> • 9-pole SUB-D socket, RS485 side • 4-wire cable with open cable ends for connection to SK CU1-STD • 3.0 m long • use with SK IC1-232/485 interface converter 	SK 5xxE with RS232 interface not required
RS232 connection cable  278910030	P-Box RS232 Vector connection cable <ul style="list-style-type: none"> • 9-pole SUB-D socket and plug, RS232 on both sides • 2.0 m long • accessories for SK IC1-232/485 interface converter + SK TU1-RS2 technology box 	SK 5xxE with RS232 interface not required
Adapter RJ12/SUB-D9  278910240	PC connection cable RJ12-SUB-D9 <ul style="list-style-type: none"> • 9-pole SUB-D socket, RJ12 plug • RS232 connection cable • 3.0 m long • accessories for connection to the PC SK 700E with integrated RS232 interface socket and all SK 5xxE frequency inverters 	Adapter RJ12/SUB-D9  278910240

Table 18: Communication accessories and adapter cables

Information

For more information on the interface converter SK IC1-232/485, refer to the separate Operating Instructions BU 0010 (see www.nord.com).

Operating Manual

For the respective pin assignment of sockets and plugs of the above connection and adapter cables, refer to the pertaining manuals (BU 0500, BU 0505 und BU 0700 - see www.nord.com) of the respective frequency inverter series or the separate Operating Instructions BU 0040. For an overview of the Operating Instructions, please refer to Section 5.1.1 Manuals.

2.5 EMC kits for SK 5xxE frequency inverters

There are more optional components such as EMC kits for the SK 5xxE frequency inverters to ensure optimum and EMC compliant cabling. The EMC kits are allocated to the respective sizes of the SK 5xxE frequency inverters and come with shield bracket, two fastening screws and a pre-assembled PE cables and must be ordered as an option. The shield brackets (without shield clamps) are mounted on the housing as standard/ex factory of SK 700E frequency inverters of sizes 1 to 4 - in the performance range from SK 700E-151-340-A (-RS2) to SK 700E-222-340-A (-RS2).

Figure 5: SK 500E with EMC kit SK EMC2-x

Size SK 700E Performance range	Size SK 5xxE Performance range	EMC kit Name Part No.
Size 1 SK 700E-151-340-A ... SK 700E-401-340-A *	Sizes 1 + 2 SK 5xxE-151-340-A ... SK 5xxE-221-340-A	SK EMC2-1 275999011

Size 3 SK 700E-112-340-A ... SK 700E-152-340-A *	Size 5 SK 5xxE-112-340-A ... SK 5xxE-152-340-A	SK EMC2-3 275999031
Size 4 SK 700E-182-340-A ... SK 700E-222-340-A *	Size 6 SK 5xxE-182-340-A ... SK 5xxE-222-340-A	SK EMC2-4 275999041
Size 7 SK 5xxE-302-340-A ... SK 5xxE-372-340-A	Size 7 SK 5xxE-302-340-A ... SK 5xxE-372-340-A	SK EMC2-5 275999051
Sizes 8 + 9 SK 5xxE-452-340-A ... SK 5xxE-902-340-A	Sizes 8 + 9 SK 5xxE-452-340-A ... SK 5xxE-902-340-A	SK EMC2-6 275999061
Sizes 10 + 11 SK 5xxE-113-340-A ... SK 5xxE-163-340-A	Sizes 10 + 11 SK 5xxE-113-340-A ... SK 5xxE-163-340-A	SK EMC2-7 275999071
*	Also applies to the SK 700E frequency inverters with optional "onboard" RS232 interface such as SK 700E-xxx-340-A-RS2. These frequency inverters already come ex factory with shield bracket but without appropriate shield clamps.	

Table 19: Overview of EMC kits for SK 5xxE frequency inverters

 Information	EMC kit SK EMC2-x
The EMC Kit provides the possibility of attaching the screening of the motor cable to a large surface of the frequency inverter (interference source). If necessary a screened brake resistor cable can be attached with the second hammer clamp. The screening angle is attached to the two housing screws on the lower edge (below the U-V-W terminals). The motor cable screening is earthed to a large area of the screening angle by means of the hammer clamp. As an alternative, you can also use the EMC kit as a strain relief only (e.g. for connection cable of a bus system) (heed bending radii!).	
For more information and connection details, please refer to the operating instructions BU 0500 or BU 0505 (see www.nord.com) for the SK 5xxE frequency inverter series.	

2.6 Mains filter

The SK 700E-xxx-340-A (-RS2) frequency inverters in the power range of 1.5 kW to 22.0 kW feature an integrated mains filter (Class A or C2) for a maximum motor cable length of 15 m and shielded motor cable. In contrast, the SK 700E-xxx-340-O frequency inverters of power range ≥ 30.0 kW do not feature an integrated mains filter. The SK 5xxE frequency inverters already feature an internal Class B or C1 mains filter (only sizes 1 to 4) for a maximum motor cable length of 5 m and shielded motor cable. For a maximum motor cable length of 20 m and shielded motor cable, the internal mains filter complies with EMC limit value classes A or C2 (all sizes). In order to comply with a higher radio interference suppression level Class B or C1, adaptive mains filters as external accessories for frequency inverter operation can be used with longer motor cables. There are two versions of these external mains filters that are to reduce the emissions of electrical interference.

Versions

- Footprint mains filter
- Chassis mains filter

Footprint

Chassis (low power)

Chassis (high power)

Figure 6: Mains filter versions

The **footprint mains filters** of type **SK LF1-460/xx-F** for SK 700E frequency inverters are only available for the power range of 1.5 kW to 22.0 kW. For SK 5xxE frequency inverters, only footprint mains filters of type **SK LF2-480/xxx-F** are available for the power range of 11.0 kW to 37.0 kW. For the SK 5xxE frequency inverters, 3 additional **footprint combination mains filters** of type **SK NHD-480/xx-F** are available for the power range of 1.5 kW to 7.5 kW in addition to the mains filters mentioned above. These footprint combination mains filters combine the advantages of a mains filter and an additional integrated mains input choke in a single housing.

The **chassis mains filters** of type **SK HLD 110-500/xxx** are available for the entire power range of 1.5 kW to 160.0 kW of SK 700E frequency inverters. Up to a power 110 kW, these chassis mains filters are also UL-approved and comply with radio interference suppression level Class A or C2 up to a maximum motor cable length of 50 m. Applications with motor cable lengths of up to 25 m; Class B or C1.

For application with an SK 5xxE frequency inverter, the identical, dependence of the input current, chassis mains filter SK HLD 110-500/xxx can only be used in the power range of 11.0 kW to 160.0 kW. For more details regarding the allocation of the respective mains filters, refer to the following sub-chapters.

Information

EMC limit value classes

For more details regarding the EMC limit value classes and permitted motor cable lengths, please refer to the respective manuals (BU 0700 and BU 0500 or BU 0505, see www.nord.com).

2.6.1 Footprint mains filters and footprint combination mains filters

The footprint (UB)- **mains filters SK LFX-4x0/xx-F** and the combined **footprint combination mains filters SK NHD-480/xx-F** differ by the additional integrated mains input choke. The following tables list and compare the various footprint mains filters allocated to each of the performance levels. Both mains filters come in protection class IP20 and can be fitted as footprint and also as book size components. Mains connection to the mains filters occurs with screw terminals. Depending on the cable type (shielded or unshielded) and the length of the motor cable, both footprint mains filters feature a radio interference suppression level Class B or C1 with a maximum motor cable length of 50 m and a shielded cable. For a maximum motor cable length of 100 m and shielded motor cable, both footprint mains filters comply with EMC limit value classes A or C2.

Table 21: 11.0 kW – 22.0 kW footprint mains filter

Information

Technical information / data sheets

The **Technical Information** TI030 xxxxxxxx offers more details such as dimensions of the various mains filter types listed in the present chapter.

The **TIs** Technical Information / data sheets of the mains filters can be downloaded on www.nord.com or can be provided upon request.

2.6.2 Chassis mains filters

Various sizes of the **chassis mains filters SK HLD 110-500/xxx** are available for both frequency inverter series (SK 700E and SK 5xxE) and all available frequency inverter power levels up to 110.0 kW.

For frequency inverter power levels 132.0 kW and 160.0 kW, other chassis mains filters of type SK HFD 103-500/300 or SK HFD 103-500/400 in a different version. The chassis mains filters come in protection class IP20 and are UL-approved (except for the SK HFD 103-500/xxx types).

Mains connection to the mains filters occurs with screw terminals. Depending on the type (shielded or unshielded) and the length of the motor cable, the chassis mains filters SK HLD 110-500/xxx feature a radio interference suppression level Class B or C1 with a maximum motor cable length of 25 m and a shielded cable. For a maximum motor cable length of 50 m and shielded motor cable, the chassis mains filter complies with EMC limit value classes A or C2. Chassis mains filters **SK HFD 103-500/xxx**, however, only comply with radio interference suppression level Class A.

Information

Chassis mains filters

The present chapter will describe only some special requirements with regard of a deviating allocation because the chassis mains filters SK HLD 110-500/xxx or SK HFD 103-500/xxx are used for both frequency inverter series (SK 5xxE and SK 700E).

Information

Technical information / data sheets

For more information and specifications such as dimensions of the chassis and footprint mains filters mentioned in this chapter, please refer to the pertaining **Technical Information** TI030 xxxxxxxx or the respective manuals (BU 0700 and BU 0500 or BU 0505).

The TIs Technical Information / data sheets of the chassis and footprint mains filters can be downloaded on www.nord.com or can be provided upon request.

2.7 Chokes

Chokes are inductive, passive components used for current limitation, interference suppression and damping of undesired harmonic content.

There are two types of chokes: input and output chokes.

Choke type

- Input choke (mains choke)
- Output choke (motor choke)

Input choke

Output chokes

Figure 7: Choke types

Both choke types are available for the entire power ranges of the SK 700E and also the SK 5xxE frequency inverters from 1.5 kW to 160.0 kW.

To reduce harmful mains voltage peaks or mains voltage fluctuations, adaptive **input chokes** of type **SK CI1-4x0/xxx-C** can be connected upstream of the frequency inverter if required by the system. The use of input chokes considerably reduces external mains feedback effects and the proportion of current harmonics to a minimum.

To improve the EMC characteristics and for safety reasons, **output chokes** of type **SK CO1-4x0/xxx-C** are often implemented between frequency inverter and the motor in case of long motor cables. They reduce the electromagnetic radiation emitted by the motor cable or provide cable compensation in case of long motor cables. For more details regarding the allocation of the respective input and output chokes, refer to the following sub-chapters.

2.7.1 Input choke

The **input chokes SK CI1-4x0/xxx-C** are connected upstream of the frequency inverter and restrict the input current to nearly the output current of the frequency inverter.

The tables below allocate the input chokes to the power ranges of the two frequency inverter series and compare them. The input chokes are UL-approved and should always be installed in the switch cabinet because of their IP00 protection class. Input chokes have screw terminals for connection.

 Information	Input choke
It is recommended that an input choke is always used for frequency inverters with a power of more than 45 kW . As a rule, you can continue using existing input chokes of type SK CI1-460/xxx-C of the SK 700E for the SK 5xxE when migrating from the SK 700E to an SK 5xxE frequency inverter. For new installations and system extensions with an SK 5xxE frequency inverter, an input choke of type SK CI1-480/xxx-C with higher rated voltage (see tables below) should be planned and implemented.	
1.5 kW to 15.0 kW

SK CI1-460/350-C  276995350	Input choke <ul style="list-style-type: none"> • Power 160.0 kW • 350.0 A continuous current • 3 x 0.084 mH inductivity 	SK CI1-480/350-C  276993350

Table 30: 90.0 kW – 160.0 kW input chokes

Information

Technical information / data sheets

For more information and specifications such as dimensions of the input chokes mentioned in this chapter, please refer to the pertaining **Technical Information** TI021 xxxxxxxxx or the respective manuals (BU 0700 and BU 0500 or BU 0505).

The **TIs** Technical Information / data sheets of the input chokes can be downloaded on www.nord.com or can be provided upon request.

2.7.2 Output choke

The **output chokes SK CO1-4x0/xxx-C** are connected between frequency inverter and motor.

The tables below allocate the output chokes to the power range of the two frequency inverter series and compare them. The output chokes are UL-approved and should always be installed in the switch cabinet because of their IP00 protection class. Output chokes have screw terminals for connection.

 Information	Output choke
We recommend using an output choke with motor cables longer than 100 m (unshielded) or longer than 30 m (shielded) . As a rule, you can continue using existing output chokes of type SK CO1-460/xxx-C of the SK 700E for the SK 5xxE when migrating from the SK 700E to an SK 5xxE frequency inverter.	
For new installations and system extensions with an SK 5xxE frequency inverter, you should always plan and implement an SK CO1-480/60-C with higher rated voltage in the power range of 18.5 kW to 300 kW.	
All available output chokes for both frequency inverter series have been designed for a frequency inverter pulse frequency of 3 to 6 KHz only!

Table 32: 90.0 kW output chokes

 Information	Technical information / data sheets
---	-------------------------------------

For more information and specifications such as dimensions of the input chokes mentioned in this chapter, please refer to the pertaining **Technical Information** TI022 xxxxxxxx or the respective manuals (BU 0700 and BU 0500 or BU 0505).

The **TIs** Technical Information / data sheets of the output chokes can be downloaded on www.nord.com or can be provided upon request.

2.8 Braking resistors

External braking resistors are available as accessory for the SK 700E-xxx-340-A (-RS2) and also the SK 5xxE-xxx-340-A frequency inverters.

Both frequency inverter series feature integrated brake choppers, to absorb the fed back energy (resulting from dynamic brake actions) using an external braking resistor.

There are two versions of these external braking resistors that are used to prevent overvoltage-induced switch-off actions of the frequency inverters.

Version

- Footprint braking resistor
- Chassis braking resistor

Footprint versions SK BR1 / SK BR4

Chassis (type 1) SK BR2

Chassis (type 2) SK BR2

Figure 8: Braking resistor versions

The **footprint braking resistors** of type **SK BR1-xxx/xxx-F** for SK 700E frequency inverters are only available for the power range of 1.5 kW to 7.5 kW. For SK 5xxE frequency inverters, footprint braking resistors of type **SK BR4-xxx/xxx** are available for the power range of 1.5 kW to 7.5 kW.

The **chassis braking resistors** of type **SK BR2 –xxx/xxx-C** are available for the entire power range of SK 700E frequency inverters from 1.5 kW to 160.0 kW.

For application with an SK 5xxE frequency inverter, the identical - depending of the resistance - chassis braking resistors BW SK BR2-xxx-xxx-C can only be used in the power range from 3.0 kW to 160.0 kW. For more details regarding the allocation of the respective braking resistors, refer to the following sub-chapters.

Information

Braking resistors

For more details regarding the resistances, continuous power specifications and dimensions of the braking resistors, please refer to the respective manuals (BU 0700 and BU 0500 or BU 0505, see www.nord.com).

2.8.1 Footprint braking resistors

The tables below list and compare the **footprint braking resistors SK BR1-xxx/xxx-F** or **SK BR4-xxx/xxx** allocated to the power ranges. The footprint braking resistor types/versions are different for both series of frequency inverters. Depending on the available space and the respective switch cabinet depth, both footprint braking resistor versions can be mounted either flat or vertically (book size) next to the frequency inverter. For thermal protection of the footprint braking resistor of type SK BR4-xxx/xxx, an optional temperature sensor (bimetal, 100 °C switching point, Part No. 275991200) can be fitted. Both footprint braking resistor versions are UL-approved and, because of their protection class IP40, can also be installed outside the switch cabinet for improved heat dissipation. For this purpose, the connection cables of the footprint braking resistors must be extended accordingly.

1.5 kW to 7.5 kW

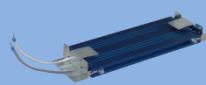

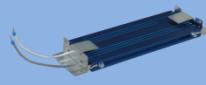

Footprint braking resistor SK BR1-xxx/xxx-F Part No.	Name Information Data	Footprint braking resistor SK BR4-xxx/xxx Part No.
SK BR1-200/300-F  278281030	Footprint braking resistor BR1 / BR4 <ul style="list-style-type: none"> • Power 1.5 kW and 2.2 kW • 200 Ω / 220 Ω resistance • 300 W / 200 W continuous power • Connection via led out cables 0.3 m / 0.5 m cable length 	SK BR4-220/200  275991220
SK BR1-100/400-F  278281040	Footprint braking resistor BR1 / BR4 <ul style="list-style-type: none"> • Power 3.0 kW and 4.0 kW • 100 Ω / 100 Ω resistance • 400 W / 400 W continuous power • Connection via led out cables 0.3 m / 0.5 m cable length 	SK BR4-100/400  275991240

Table 33: 1.5 kW – 7.5 kW footprint braking resistors

Information

Technical information / data sheets

For more information, resistances, continuous power ratings and specifications such as dimensions of the footprint braking resistors mentioned in this chapter, please refer to the pertaining **Technical Information TI014 xxxxxxxx** and the respective manuals (BU 0700 and BU 0500 or BU 0505).

The manuals and the **TIs** Technical Information / data sheets of the footprint braking resistors can be downloaded on www.nord.com or can be provided upon request.

2.8.2 Chassis braking resistors

Various sizes of the **chassis braking resistors SK BR2-xxx/xxx-C** are available for both frequency inverter series (SK 700E and SK 5xxE) and all available frequency inverter power levels up to 160.0 kW. There are two types/sizes, type 1 and type 2. The chassis braking resistors or resistor elements are integrated into a housing grating and can be used universally. The chassis braking resistors come with an integrated temperature sensor (bimetal) ex-factory. The temperature sensor can be connected to a digital input of the frequency inverter with two terminals (4 mm²), and one of the safety functions ("Block voltage" or "Emergency stop ") can be programmed.

Both chassis braking resistor versions are UL-approved and, because of their protection class IP20, can also be installed outside the switch cabinet for improved heat dissipation. For this purpose, the chassis braking resistors have to be connected to the respective frequency inverter via a separate connection cable, a shielded cable is recommended. The connection cable should be as short as possible.

Information

Chassis braking resistors

As the chassis braking resistors SK BR2 -xxx/xxx-C are used for both series of frequency inverters (SK 5xxE and SK 700E), there is no allocation to the frequency inverter power levels in the present chapter.

Information

Technical Information

For more details regarding the resistances, continuous power specifications and dimensions of the braking resistors, please refer to the respective manuals (BU 0700 and BU 0500 or BU 0505).

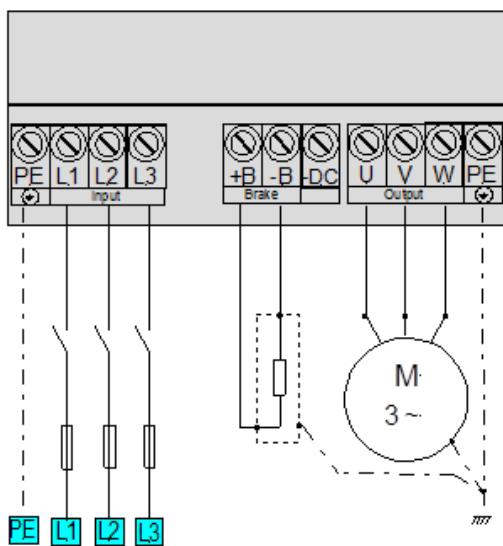

The manuals can be downloaded from www.nord.com.

3 Power and control terminal connection

3.1 Power connection

Connection of mains power, motor cable and braking resistor to the SK 700E series of frequency inverters occurs from below. The structure and the layout of the terminal strip of both versions are slightly different (frequency inverters up to 22.0 kW and more than 30.0 kW).

Power connection ≤ 22.0 kW

Power connection ≥ 30.0 kW

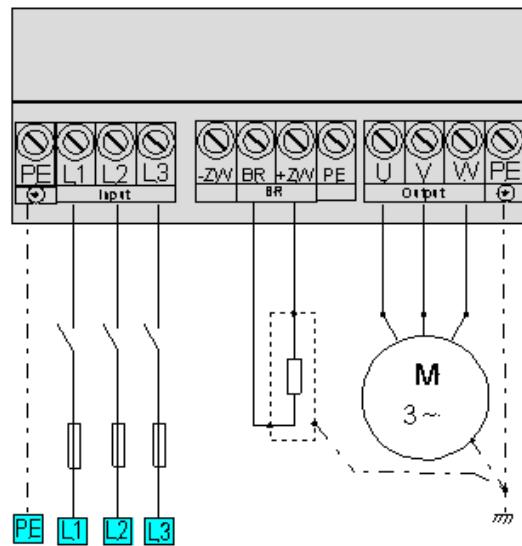

Figure 9: Power connection SK 700E

Compared to the SK 700E (all connections from below), the terminal connections of the SK 5xxE up to 37.0 kW are structured differently. Mains connection to the SK 5xxE frequency inverters occurs from above, motor and braking resistors connect from below. All terminal connections to inverters of size 8 (≥ 45.0 kW) and higher occur from below, on the frequency inverter front.

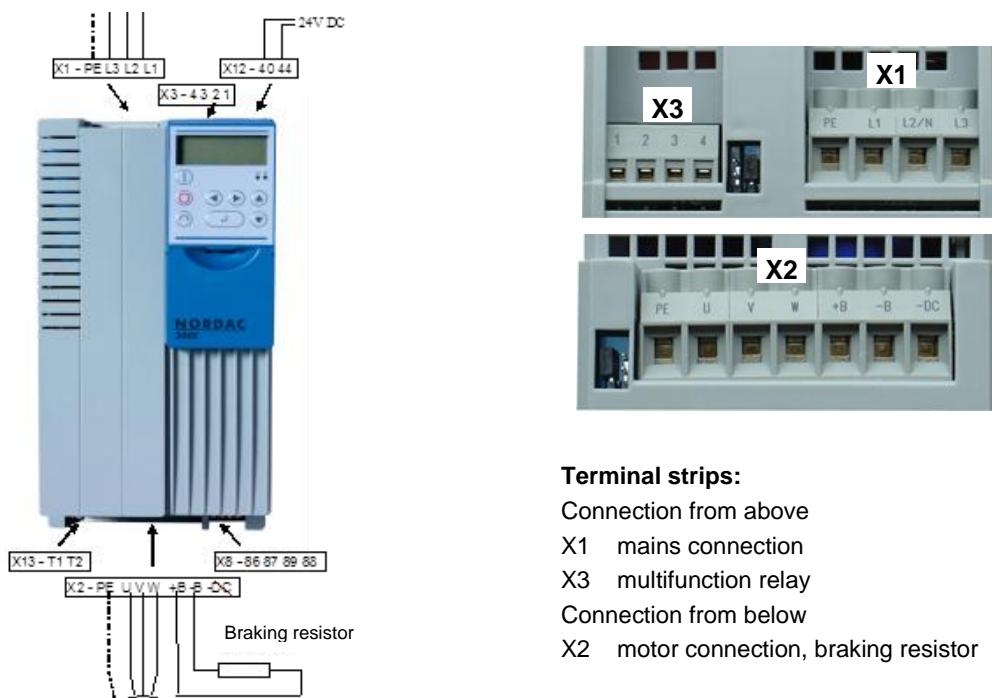

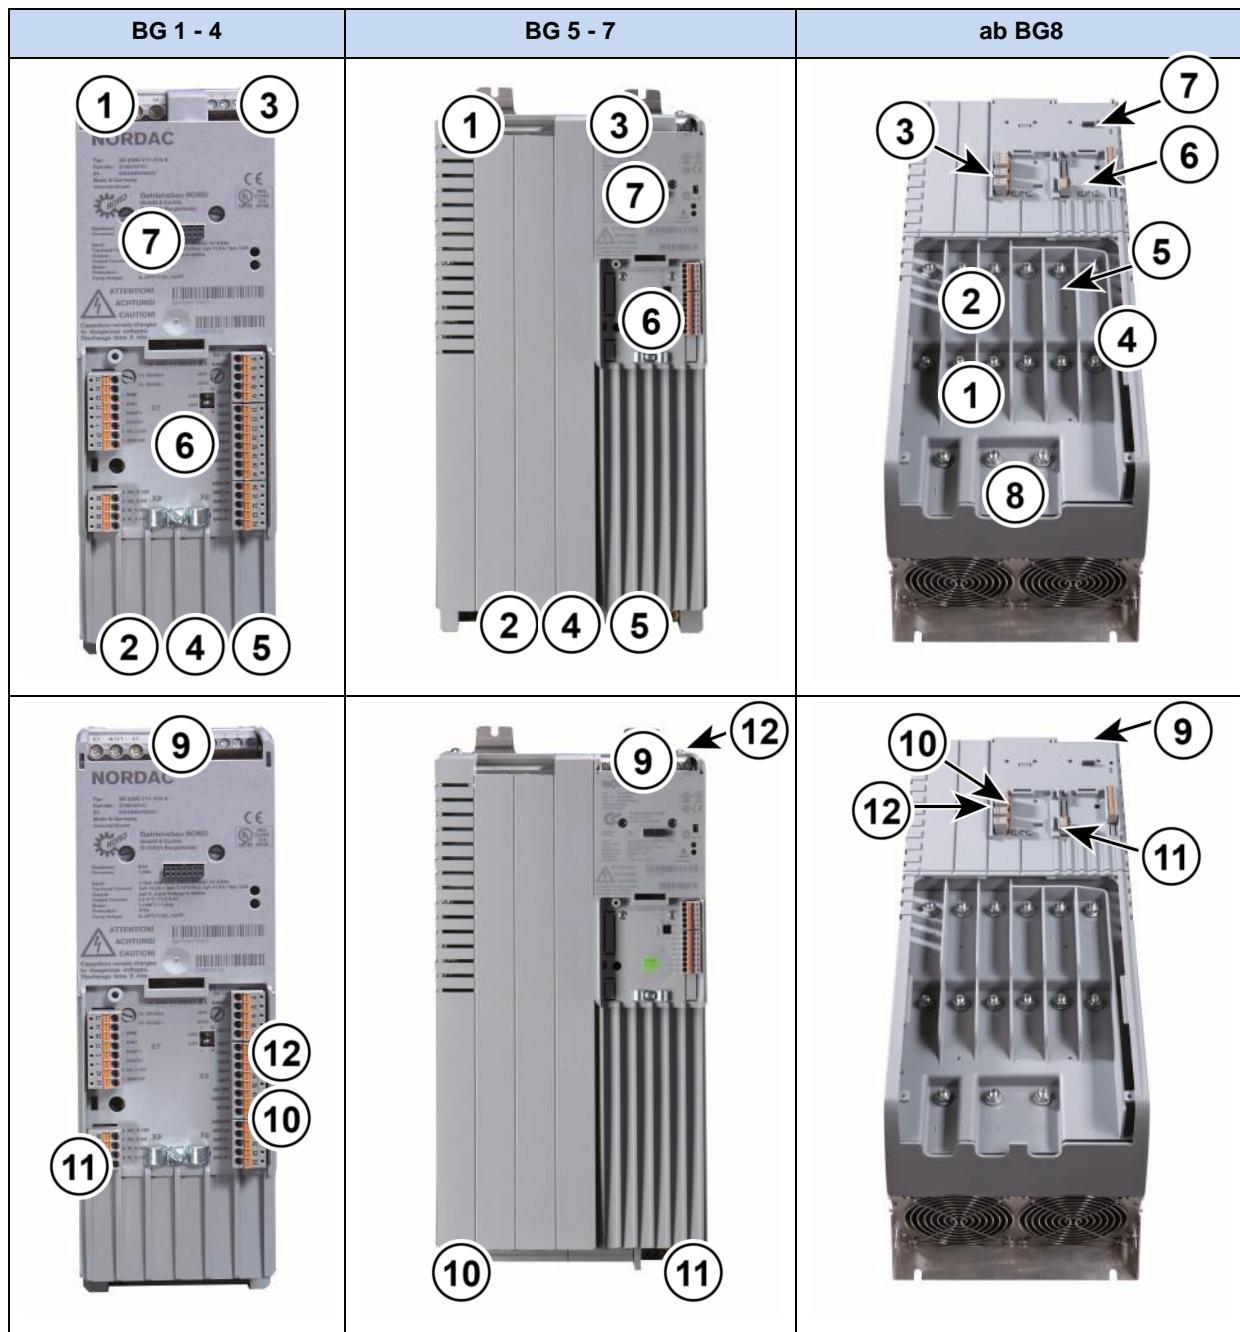

Figure 10: Power connection SK 5xxE up to size 7

3.2 Control terminal connection

To connect I/O control signals to the SK 700E series of frequency inverters, several customer units of type SK CU1-xxx are available.

The SK 5xxE series of frequency inverters features onboard control terminals for the connection of I/O control signals.

Figure 12: Customer units SK CU1-xxx and I/O control signal connections

3.2.1 I/O customer units

To connect I/O control signals to the SK 700E frequency inverters, 6 different I/O customer units are offered. In contrast, the SK 5xxE series of frequency inverters by default comes with respective onboard terminals to connect the I/O control signals. Please heed the differing terminal numbers/terminal names (e.g. terminal 42 / VO 15V, terminal 44 / VI 24V or VO 24V) for the different power supplies of inputs and outputs of the SK 5xxE frequency inverter types or sizes.

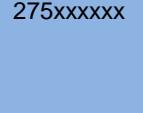

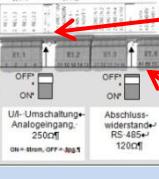

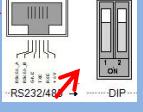

SK 700E			Name Function [factory setting]	SK 5xxE			SK 5xxE onboard Part No.	
Customer unit SK CU1-BSC Part No.	Connector Terminal No. Name	Terminal strip Terminal No. Name						
 Basic I/O SK CU1-BSC  278200000	X3.1	01	REL1.1	Relay 1 / output 1 NO relay contact [brake control {1}]	X3	1	K1.1	  
		02	REL1.2			2	K1.2

*****	The analogue 0...10 V output signal of SK 5xxE frequency inverters must be converted to 0/4...20 mA with a commercially available external signal converter. As an alternative, an SK 54xE frequency inverter with an IO extension SK EBIOE-2 (275900210) can be used. For more information, refer to the Technical Information TI 275900210 (see www.nord.com).				

Table 37: Customer unit Multi I/O 20mA, SK CU1-MLT-20mA

3.2.2 Field bus customer units

To connect field bus systems (incl. some I/O control signal terminals) to the SK 700E frequency inverters, 4 different field bus customer units are offered. In contrast, the SK 5xxE series of frequency inverters by default comes with respective onboard terminals to connect some field bus systems and some I/O control signals. Please heed the differing terminal numbers/terminal names (e.g. terminal 42 / VO 15V, terminal 44 / VI 24V or VO 24V) for the different power supplies of inputs and outputs of the SK 5xxE frequency inverter types or sizes.

***	For more information on the two onboard RJ45 CAN bus sockets (X9 and X10), please refer to manuals BU 0060, BU 0500 or BU 0505 (see www.nord.com). The CAN onboard function is only available for all frequency inverter types ≥ SK 511E. To use the CAN / CANhord functions of the SK 5xxE frequency inverters, the CAN bus requires an external 24 V voltage supply . Connection of the external 24 V supply occurs via the two RJ45 sockets X9 or X10, pin 3 or 7 for CAN_GND and pin 8 for CAN_24V. More information on the WAGO adapter module RJ45 / terminal, see chapter 2.1.3 Additional options for the functions.

Table 41: Field bus customer unit USS, SK CU1-USS

3.2.3 PTC connection

Connection of the motor temperature sensor of PTC to the SK 700E series of frequency inverters occurs by way of one of the digital inputs of the customer units or extension units. Depending on the size of the PTCs, connection to the SK 5xxE series of frequency inverters occurs via digital inputs (preferably DI 5) or, with size ≥ 5 , via separate terminals T1 and T2 of terminal block X15.

Table 42: PTC connection terminals

4 Dimensions

4.1 Frequency inverter

Contrary to the SK 700E, the SK 5xxE frequency inverters cannot be mounted directly with their rear in a switch cabinet but with two (sizes 1 – 4) or four (sizes 5 – 7) supplied wall mount bracket.

SK 5xxE frequency inverters \geq size 8 feature an assembly device for the wall mount brackets integrated their housing.

Figure 13: Wall mount bracket

4.1.1 Frequency inverter series SK 700E \leftrightarrow SK 5xxE

The tables and figures below give the dimensions [mm] of both series of frequency inverters, depending on their power as well as the respective weights [kg].

SK CO1-460/170-C 90.0 kW	A [height] B [width] C [depth]		160 140 155 120 84 85	47.0
Choke weight approx. [kg]		9.0	63.5	

Table 49: Dimensions and weights of output chokes, power 18.5 kW – 30.0 kW and 90.0 kW

4.5 Braking resistors

4.5.1 Footprint braking resistors

The tables and figures below give the dimensions [mm] of footprint braking resistors as well as the respective weights [kg].

Dimensions

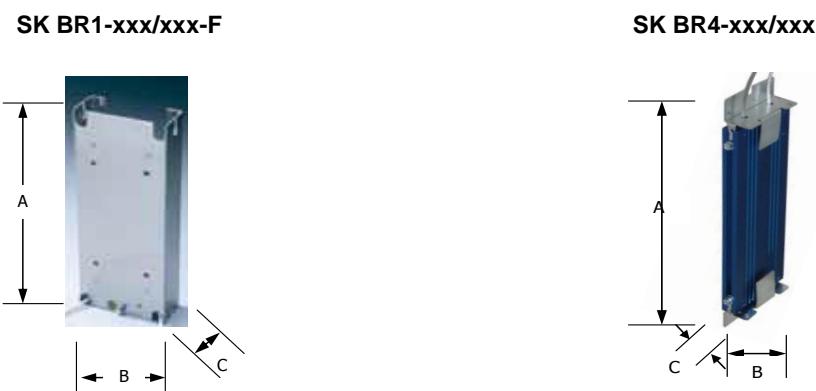

Figure 21: Dimensions of footprint braking resistors SK BR1/xxx/xxx-F and SK BR4-xxx/xxx

Dimensions and weights

SK 5xxE SK 700E	Dimensions [mm]	SK BR4-220/200 1.5 kW and 2.2 kW	SK BR4-100/400 3.0 kW and 4.0 kW	SK BR4-60/600 5.5 kW and 7.5 kW		Resistance Weight approx. [kg]
SK BR1-200/300-F 1.5 kW and 2.2 kW	A [height] B [width] C [depth]	281 270 121 88 48 27				1.0
SK BR1-100/400-F 3.0 kW and 4.0 kW	A [height] B [width] C [depth]		281 285 121 98 48 58			1.6
SK BR1-60/600-F 5.5 kW and 7.5 kW	A [height] B [width] C [depth]			331 330 121 98 48 58		1.9
Resistor weight approx. [kg]		0.7	1.6	2.1		

Table 50: Dimensions and weights of footprint braking resistors, power 1.5 kW – 7.5 kW

4.5.2 Chassis braking resistors

Information

As the chassis braking resistors SK BR2 -xxx/xxx-C are used for both series of frequency inverters (SK 5xxE and SK 700E), there is no allocation to the frequency inverter power levels in the present chapter.

Information

Chassis braking resistors

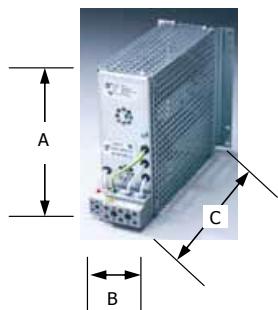

Technical Information

For more details regarding the dimensions and weights of the chassis braking resistors, please refer to the respective manuals (BU 0700 and BU 0500 or BU 0505) or the **Technical Information**.

The manuals and the **TIs Technical Information / data sheets** of the braking resistors can be downloaded on www.nord.com or can be provided upon request.

Dimensions

SK BR2-xxx/xxx-C
Type 1

SK BR2-xxx/xxx-C
Type 2

5 Additional information / Appendix

5.1 Further documentation

To supplement the present Migration Guide, manuals, Technical Information / data sheets, flyers and brochures are available that provide, additional information on the products mentioned, in the present document.

5.1.1 Manuals

Basic information about the frequency inverters can be found in the relevant manuals for the frequency inverter series (e.g. **BU 0500** for SK 500E).

Further information for bus-specific technology options (e.g. field bus options SK TU3-PBR-24V) is given in respective supplementary manuals (e.g. **BU 0020** for PROFIBUS DP options).

Separate information on the control and parameter boxes (e.g. SK TU3-PAR or SK PAR-2E) is available in manual BU 0040 Control and Parameter Boxes.

Document	Name
BU 0000	Manual of NORD CON software
BU 0020	Manual of PROFIBUS DP
BU 0030	Manual of CANbus
BU 0040	Manual of Control and Parameter Boxes
BU 0060	Manual of CANopen
BU 0070	Manual of InterBus
BU 0080	Manual of DeviceNet
BU 0090	Manual of AS Interface
BU 0500	Manual of SK 5xxE (SK 500E ... SK 535E)
BU 0505	Manual of SK 54xE (SK 540E and SK 545E)
BU 0510	Manual of POSICON positioning control for ≥ SK 530E
BU 0700	Manual of SK 700E
BU 0710	Manual of POSICON positioning control for SK 700E
BU 0920	Manual of setpoint card + / - 10 V

5.1.2 Technical information / data sheets

Basic information on some optional components such as braking resistors, EMC mains filters, adapter and connection cables - used for the frequency inverter series mentioned here – is available in separate Technical Information / data sheets (e.g. TI 275900210 for the IO extensions SK EBIOE-2).

Document	Name
TI 275900210	Tech. Information / data sheet SK EBIOE-2 IO extension
TI014_275991240	Data sheet of braking resistor SK BR4-100/400
TI014_275991260	Data sheet of braking resistor SK BR4-60/400
TI030_278273006	Data sheet of EMC mains filter SK NHD-480/6-F
TI030_278273010	Data sheet of EMC mains filter SK NHD-480/10-F
TI030_278273016	Data sheet of EMC mains filter SK NHD-480/16-F
TI051_275274601	Data sheet of connection cable SK TIE4-RJ12-RJ12
TI051_278910020	Data sheet of connection cable P-Box Vector
TI051_278910220	Data sheet of adapter cable USB / 5 V

For more information on other optional components such as input and output chokes, chassis and footprint braking resistors etc., please refer to the manuals of the frequency inverter series (BU 0500, BU 0505 and BU 0700).

Please contact the Service / Technical Support of Getriebbau NORD GmbH & Co. KG if you need other information regarding the optional components.

We can also provide manufacturer-specific data sheets upon request.

5.1.3 Product flyers / brochures

Comprehensive product information on the two frequency inverter series SK 5xxE and SK 700E, the various technology options and pertaining accessories (such as chokes, braking resistors, EMC mains filters, etc.) is available in the respective product flyers for both frequency inverter series (**F 3050** and **F 3051** for SK 500E).

Document	Name
F 3050	Switch cabinet inverter SK 500E
F 3051	Switch cabinet inverter SK 500E 45 – 160 KW
F 3070	Frequency inverter SK 700E

5.2 Software

The software listed below can be downloaded on the homepage www.nord.com (main page -> Documentation -> Software).

 Information	Software
Getriebbau NORD GmbH & Co. KG will not assume liability for installation and operation of NORD CON, NORDAC options software and NORD EPLAN MACROS!	

5.2.1 NORD CON

You can download a PC application from www.nord.com for programming and operating the SK 5xxE and SK 2xxE series of frequency inverters.

NORD CON Version 2.0 can set up parameters of starters, frequency inverters as well as technology units and customer units.

For further information please refer to the link below.

Software	Description	Version
NORD CON	NORD CON is a PC program to control and parameterise frequency inverters manufactured by NORD GmbH & Co. KG. Communication with the frequency inverter occurs via the serial SUB-D9 interface of the PC or a commercially available USB connected to a USB port.	≥ 2.2

5.2.2 NORD options

For planning and programming the various bus system options, several software files can be downloaded from www.nord.com for the SK 5xxE series of frequency inverters allowing for integration into a wide range of automation systems.

NORDAC Options contain device-specific information and parameters necessary for connecting bus-specific field bus options (technology units and customer units) of NORD frequency inverters to the currently used bus system.

For more information, please refer to the link below or the pertaining "readme" text files.

Software	Description	Version
<u>NORDAC Options</u>	<p>NORDAC Options are software files with bus system-specific software files (such as PROFIBUS DP – GSD, CANopen – EDS, EtherCAT – XML, etc.) for planning of system-specific automation projects with frequency inverters by Getriebbau NORD GmbH & Co. KG.</p> <p>The software files are allocated to the available field bus options of the various frequency inverter series.</p> <p>Implementation of the software files occurs by inclusion into the controller or automation software of the respective bus system manufacturer.</p>	Software-specific

Notes on NORDAC Options

The following **must** be heeded when planning software of automation systems (PLC, CANopen Master, etc.) when migrating to the new field bus technology units of type SK TU3-xxx (-24V) for the SK 5xxE series of frequency inverters:

1. different software files for PROFIBUS DP (GDS), CANopen (EDS) and DeviceNet (EDS)
2. different order of process data (PZD)

PROFIBUS DP Area with PPO types 2 and 4: setpoints and actual values 2 / 3 are swapped

CANopen Area with up to three 16-bit: setpoints and actual values 2 / 3 are swapped

DeviceNet Area with up to three 16-bit: setpoints and actual values 2 / 3 are swapped

3. Different structure of the parameter label (PKE)

Some parameter names and structures such as array parameter structure, parameter functions, sub index (IND) etc. have changed

Information

Supplementary manuals

For more information on the deviations/differences of the parameterisation structures, regarding the field bus communication variants, please refer to the respective supplementary manual (e.g. BU 0020 PROFIBUS DP), also see chapter 5.1.1 Manuals.

5.3 3D models

Upon request, Service / Technical Support of Getriebbau NORD GmbH & Co. KG can provide STEP 3D models of the frequency inverters and of some optional components.

5.4 NORD EPLAN macros

To plan and create circuit diagrams for the SK 5xxE series of frequency inverters, appropriate EPLAN macros can be downloaded from www.nord.com.

For further information please refer to the link below.

Software	Description	Version
NORD EPLAN macros	There are NORD EPLAN macros for planning and documenting electronic automation projects for frequency inverters by Getriebbau NORD GmbH & Co. KG.	≥ 5.50 or Electric P8

5.5 Technical support

Please contact the Service / Technical Support of Getriebbau NORD GmbH & Co. KG if you need other information regarding the present document or other possible applications.

Upon request, users can obtain additionally required information or software files (such as special software versions, firmware for software updates, etc.) after technical consultation.

5.6 Abbreviations in the Migration Guide

AS (AS1)	AS Interface	MLT	Multi customer unit
AIN	Analogue input	PAR	Parameterbox
AOUT	Analogue output	PBR	PROFIBUS DP
BSC	Basic customer unit	PKE	Parameter identifier
BR	Braking resistor	POS	Extension unit POSICON
CAN	Controller Area Network	RS2	Abbreviation for RS232 interface
CAO	Controller Area Network, higher level protocol	RS232	Serial interface
CTR	ControlBox	RS485	Standard interface
CU1	Customer unit	PZD	Process data
DEV	DeviceNET	PPO	Parameter process data object
DI (DIN)	Digital input	SK	Schlicht & Küchenmeister
DO (DOUT)	Digital output	STD	Standard customer interface
I / O	Input /Output	PLC	Programmable Logic Controller
EBIOE-2	External IO extension	SSI	Synchronous serial interface
EDS	Electronic Data Sheet	SW	Software version, P707
EMC	Electromagnetic compatibility	TI	Technical information / Data sheet (Data sheet for NORD accessories)
ENC	Extension unit Encoder	TTL	Transistor-transistor logic
FI	Frequency inverter	TU1 / TU3	Technology unit
GSD	Device master data	UB	Footprint
I/O	In / Out (Input / Output)	USS	Universal serial interface
IND	Index		Protocol
LCD	Liquid crystal display	XU1	Extension unit
LED	Light emitting diode
