

VMX-synergy™

MOTORTRONICS

Solid State AC Motor Control

Quick Start Guide

VMX-SGY-401 to VMX-SGY-505

The original pioneers of soft start technology, Motortronics have been at the forefront of motor control innovation since the 1970's. Motortronics have manufactured and supplied over 1 million products into the market place and are recognised as the reference point for many control solution providers worldwide. In 2009, the need for a new technology that bridged the gap between drive technology and soft start was recognised and the development process began for VMX-synergy™, a new form of motor control that met the needs of those requiring the functionality of a drive in a fixed speed application. The key aspects of a drive (energy saving and communications) as well as original features of a soft start including internal bypass and lower cost, meant the base design was enhanced even further.

iERS (Intelligent Energy Recovery System) is Motortronics patented energy saving system with a combined internal bypass to save energy on lightly loaded motors. iERS reduces the voltage and current supplied to lightly loaded motors to only allow the motor to consume the exact amount of energy required to maintain the speed at that load. When the motor is at full load the internal bypass closes, this reduces the losses produced by the control element. This combined approach enables iERS to save more energy in more applications than any other competing technology.

iERS has been market proven over the past 10 years and has now reached its latest development realising even greater savings. Applications such as compressors, refrigerators, pump jacks, moulding machines and chillers can typically see savings of around 8-40% of total energy consumption when lightly loaded.

With size and cabinet capacity an ever increasing focus, Motortronics developed the world's smallest power to size ratio motor controller. VMX-synergy™ utilised Motortronics globally renowned Automatic Setup feature to programme the unit to each individual application using only a 8 button process. Since then it has removed buttons and uses touch screen technology bringing the user interface to even greater management levels.

With full motor overload protection as well as full data logging, upgradeable software in the field and extensive input/output programmability, VMX-synergy™ meets all of the key design criteria.

Enabling the Intelligent Energy Recovery System (iERS)

iERS can produce energy savings in suitable applications. However, the user should have an understanding of the application and load characteristic before enabling the feature.

Loads which exhibit frequent changes in motor torque may cause the VMX-synergy™ unit to switch rapidly between the iERS on state and the 'bypassed' state as the motor torque changes. If left unchecked, such switching may cause premature wear of the internal bypass components and may invalidate the warranty.

If the loaded / unloaded state changes more than 4 times per minute, iERS should not be enabled.

Applications that are typically well suited to the iERS feature include; Artificial Lift Pump Jacks, Injection Moulding Machines, Mixers, Saws, Rolling Mills, Grinders, Hydraulic Pumps, Crushers, Conveyors, Compressors and Vertical Transport applications.

If the user requires further support regarding the suitability of the application, they should seek support from Motortronics or an Authorised Distributor before enabling the iERS function

Important information

Installers should read and understand the instructions in this guide prior to installing, operating and maintaining the soft start. The following symbols may appear in this guide or on the soft start to warn of potential hazards or to draw attention to certain information.

Dangerous Voltage

Indicates the presence of a hazardous voltage which could result in personal injury or death.

Warning/Caution

Indicates a potential hazard. Any instructions that follow this symbol should be obeyed to avoid possible damage to the equipment, and personal injury or death.

Protective Earth (Ground)

Indicates a terminal which is intended for connection to an external conductor for protection against electric shock in case of a fault.

Caution Statements

The examples and diagrams in this manual are included solely for illustrative purposes. The information contained in this manual is subject to change at any time and without prior notice. In no event will responsibility or liability be accepted for direct, indirect or consequential damages resulting from the use or application of this equipment.

Short Circuit

Motortronics soft starts are not short circuit proof. After severe overload or short circuit, the operation of the soft start should be fully tested by an authorised service agent.

- VMX-Synergy™ soft starts contain dangerous voltages when connected to the mains supply. Only qualified personnel that have been completely trained and authorised, should carry out installation, operation and maintenance of this equipment.
- Installation of the soft start must be made in accordance with existing local and national electrical codes and regulations and have a minimum protection rating.
- It is the responsibility of the installer to provide suitable grounding and branch circuit protection in accordance with local electrical safety codes.
- The STOP function of the soft start does not isolate dangerous voltages from the output of the soft start. An approved electrical isolation device must be used to disconnect the soft start from the incoming supply before accessing electrical connections.

Environment - installation

VMX-synergy™

VMX-synergy™ VMX-SGY-401 to VMX-SGY-403

Weight = 65.00 kg (143.3lbs)

Dimensions

VMX-synergy™ VMX-SGY-501 to VMX-SGY-505

Weight = 72.0 kg (158.7lbs)

Enclosure Ventilation

When fitting VMX-synergy™ into a cabinet, ventilation must be provided if the heat output of the unit is greater than the cabinet will dissipate. Use the following formula to determine the fan requirement. An allowance has been incorporated into the formula so that the figure for Q is the air delivery in the fan suppliers data.

Without external bypass, the maximum power dissipation occurs when energy saving.

Heat dissipated can be approximated with the formula:-

Watts (VMX-synergy™) = VMX-synergy™ current rating x 3

With external bypass installed, the formula becomes:-

Watts (VMX-synergy™) = 1/2 x VMX-synergy™ current rating x 3

$$Q = \frac{4 \times W_t}{(T_{\max} - T_{\text{amb}})}$$

Q = volume of air (cubic metres per hour-m³/h)

Wt = Heat produced by the unit and all other heat sources within the enclosure (Watts)

Tmax = Maximum permissible temperature within the enclosure

(40°C for a fully rated VMX-synergy™)

Tamb = Temperature of the air entering the enclosure (°C)

If you prefer to work in CFM, substitute °F for °C. Q is now in CFM

Wiring connection

	Required rating	Programmable	Default	Description	Default	Programmable	Required rating

Representative of terminal label. See TABLE 1, U_S for AC supply rating as marked on actual VMX-synergy model.

VMX-SGY-401 to VMX-SGY-505 Control Power Consumption
Table 1: Interface Control Voltages, 2 Amp supply (continuous).

Model No (3)	U _C (+10% -15%)	U _S (+10% -15%)	Notes
VMX-SGY-401 4-01 to VMX-SGY-505-4-01	110Vac or 230Vac or 24Vdc	110Vac or 230Vac or 24Vdc	The system can have either a 110/230Vac mains or 24Vdc input NOT both.  #4
Notes			
#1	The programmed digital input setting on D1COM, D1-1I, D1-2I <u>must</u> correspond to the voltage applied to these terminals to avoid risk of damage to the equipment.		
#2	The programmed digital input setting on D2COM, D2-1I <u>must</u> correspond to the voltage applied to these terminals to avoid risk of damage to the equipment.		
#3	The control supply can be 110 to 230Vac applied to the N, L terminals or 24Vdc applied to the 0Vdc, 24V input terminals. The correct voltage as specified must only be applied to one of these supply inputs to avoid risk of damage to the equipment.		
#4	Refer to VMX-synergy User Manual (MAN-SGY-031) for factory default settings.		

*24Vdc Specification
24Vdc 60W
Residual ripple 100mV
Spikes/switching Peaks 240mV
Turn On/Off response
No overshoot of V out
Overvoltage protection output
voltage must be clamped to <30Vdc

Wiring connection

! For suitable short circuit protection devices (SCPD's) see short Circuit Protection in the Technical Information/ standards section of this guide.

! In Delta
For this configuration applying the equation.
 $VMX-synergy^{TM} I_e = \frac{I_e (motor)}{\sqrt{3}}$
Allows lower current rating VMX-synergy™ than the motor.

When In Delta configuration is used a line contactor controlled by VMX-synergy™ MUST be used with the In Delta Firing Mode selected in the advanced menu.

Fan Electrical Supply

The cooling fans are of fixed voltage (defined at the time of order), and require a separate electrical connection (110Vac or 230Vac). The required fan rating is shown on the label (see below)

Wiring connection

3 Wire Control Diagram
110/230Vac control supply (U_s)

3 wire Control Diagram 24Vdc control supply (U_s)
and digital input (U_c) programming.

Digital
input
programming

D1 - 1I = Start
D1 - 2I = Stop
D2 - 1I = Reset

	CAUTION
#1	REFER TO TABLE 1 on page 6 for input control voltages. These recommended wiring diagrams are specifically where the control supply voltage (U_s) is identical to the control circuit voltage (U_c) and not to be supplied separately. Other wiring configurations must also be in accordance with existing local and national codes and regulations.
#2	Power factor correction capacitors must NOT be positioned between the soft start and the motor or there is a risk of damaging thyristors due to current peaks.

110/230Vac (U_s) and (U_c) user
programmable control diagram

24Vdc (U_s) and (U_c) user programmable control
diagram.

User programmable Inputs
are fully programmable

D1 - 1I = High Start / Low Stop
D1 - 2I = None
D2 - 1I = High Reset

1) Optional high reset. If this reset is required ensure "User Programmable" is selected in the control method menu found in the Digital Inputs menu. If you would prefer the reset to work by removing and reapplying the Start Signal on D1 - 1I then select "Two wire control" in the control method menu.

Soft start motor reversing circuit

VMX-synergy™

Below is a soft start reversing circuit without soft stop, it shows the main components required. You must follow your local wiring and electrical regulations when constructing this circuit, set to 'User Programmable' control.

 CAUTION

REFER to TABLE 1 on page 6 for input control voltages.

Item	Description
K1, K2	AC3 rated forward/reverse contactors
K1A, K2A	1 second drop out delay timers
VMX-synergy™	VMX-synergy™ soft start

These are the major components of the system. Local wiring regulations should be observed. Note the use of timers to ensure that a reversed voltage is not applied to the starter/motor before the motor field has had some chance to die away.

The thermal capabilities of VMX-synergy™ should be considered.

Sequential Soft Start diagram

VMX-synergy™

CAUTION

REFER to TABLE 1 on page 6 for input control voltages.

110Vac, 230Vac or 24Vdc Control Supply

Notes

Soft Starter must have stop time set to 0
T1 Time between K1 or K3 closing and the starter being energised - 0.5 sec minimum.
T2 Time between B1 closing and K3 closing
-Dependant on application - 0.5 sec minimum.

Set to 'Two wire control'

Emergency stop switch cuts off control supply and drops out starter and motors.
Stop switch drops control supply from contactors and timers stopping both motors.
Start switch initiates softstart then bypass of motor 1 immediately followed by softstart then bypass of motor 2.

Soft Starter must be rated for combined starting duty.

The control logic can be continued for more motors.

The thermal capabilities of VMX-synergy™ should be considered.

Current Transformers are supplied separately and must be fitted externally.

The unit has the current transformer (CT) cables pre-installed, colour coding corresponds to the phase wiring identification.

Attach the CT cables to the transformers adhering to the numbering scheme.

If the motor overload function is required when the unit is configured for external bypass operation, the current transformer must be placed outside the bypassed circuit.

A separate, correctly rated AC53 bypass contactor may be used to provide thyristor bypass. The contactor must be connected in parallel with the VMX-synergy™ starter as shown in the diagrams below.

Soft-Starting and Soft-Stopping remain active as normal. At the completion of the starting ramp a bypass contactor is closed, effectively removing the thyristors from circuit, which in turn eliminates heating losses.

The contactor is controlled by a programmable relay set to 'End of Start' (terminal 44), ensuring that bypassing occurs only occurs after completion of the start, and the motor terminal voltage is at supply voltage.

Quick Start Guide

(EN) Electric current! Danger to life!

Only skilled or instructed persons may carry out the operations.

(DE) Lebensgefahr durch Strom!

Nur Elektrofachkräfte und elektrotechnisch unterwiesene Personen dürfen die im Folgenden beschriebenen Arbeiten ausführen.

(FR) Tension électrique dangereuse!

Seules les personnes qualifiées et averties doivent exécuter les travaux ci-après.

(ES) ¡Corriente eléctrica! ¡Peligro de muerte!

El trabajo a continuación descrito debe ser realizado por personas cualificadas y advertidas.

(IT) Tensione elettrica: Pericolo di morte!

Solo persone abilitate e qualificate possono eseguire le operazioni di seguito riportate.

(ZH) 触电危险!

只允许专业人员和受过专业培训的人员进行下列工作。

(RU) Электрический ток! Опасно для жизни!

Только специалисты или проинструктированные лица могут выполнять следующие операции.

(NL) Levensgevaar door elektrische stroom!

Uitsluitend deskundigen in elektriciteit en elektotechnisch geïnstrueerde personen is het toegestaan, de navolgend beschreven werkzaamheden uit te voeren.

(DA) Livsfare på grund af elektrisk strøm!

Kun uddannede el-installatører og personer der er instruerede i elektrotekniske arbejdsopgaver, må udføre de nedenfor anførte arbejder.

(EL) Προσοχή, κίνδυνος ηλεκτροπληξίας!

Οι εργασίες που αναφέρονται στη συνέχεια θα πρέπει να εκτελούνται μόνο από ηλεκτρολόγους και ηλεκροτεχνίτες.

(PT) Perigo de vida devido a corrente elétrica!

Apenas electricistas e pessoas com formação electrotécnica podem executar os trabalhos que a seguir se descrevem.

(SV) Livsfara genom elektrisk ström!

Endast utbildade elektriker och personer som undervisats i elektroteknik får utföra de arbeten som beskrivs nedan.

(FI) Hengenvaarallinen jännitel!

Vain pätevät sähköasentajat ja opastusta saaneet henkilöt saavat suorittaa seuraavat työt.

(CS) Nebezpečí úrazu elektrickým proudem!

Níže uvedené práce smíji provádět pouze osoby s elektrotechnickým vzděláním.

(ET) Eluhtliik! Elektrilöögiolit!

Järgnevalt kirjeldatud töid tohib teostada ainult elektriala spetsialist või elektrotehnilise instrueerimise läbinud personal.

(HU) Életveszély az elektromos áram révén!

Csak elektromos szakemberek és elektrotechnikában képzett személyek végezhetik el a következőkben leírt munkákat.

(LV) Elektriskā strāva apdraud dzīvību!

Tālāk aprakstītos darbus drīkst veikt tikai elektrospeciālisti un darbam ar elektrotehnikām iekārtām instruētās personas!

(LT) Pavojus gyvybei dėl elektros srovės!

Tik elektrikai ir elektrotechnikos specialistai gali atlikti žemiau aprašytus darbus.

(PL) Porażenie prądem elektrycznym stanowi zagrożenie dla życia!

Opisane poniżej prace mogą przeprowadzać tylko wykwalifikowani elektrycy oraz osoby odpowiednio poinstruowane w zakresie elektrotechniki.

(SK) Življenjska nevarnost zaradi električnega toka!

Spodaj opisana dela smejo izvajati samo elektrostrokovnjaki in elektrotehnično poučene osebe.

(SR) Nebezpečnost ugroženja života električnim prúdom!

Práce, ktoré sú nižšie opísané, smú vykonávať iba elektroodborníci a osoby s elektrotechnickým vzdelaním.

(BG) Опасност за живота от електрически ток!

Операциите, описани в следващите раздели, могат да се извършват само от специалисти-електротехници и инструктиран електротехнически персонал.

(RO) Atenție! Pericol electric!

Toate lucrările descrise trebuie efectuate numai de personal de specialitate calificat și de persoane cu cunoștințe profunde în electrotehnică.
